***ABSTRACT.** The used and pluvial systems disorders for pluvial waters in the cities of the Mureș Valley between Reghin and the confluence whit Aries River and their perspective moderns. The interaction between the human activity and the natural cycle for the water, realized in the urban areas, and his function for support the urban system are developed. This interaction has two principal forms. In this conditions is making a perturbation at the natural cycle at the water, to creation a urban cycle, that mark a faithful connection between the human and the water in urban areas.*
